

Vaginal Applicators

Benefits

- Key component of complete Xoft System, an integrated, radiation therapy platform solution
- Precise delivery of targeted treatment, minimizing dose to surrounding healthy tissue
- Radiopaque applicator for improved visibility on images
- On/off capability for enhanced radiation safety
- Fast dose fall-off enables treatment in a standard room with minimal shielding requirements
- Accelerated treatment time increases operational efficiency and patient satisfaction

With a range of expertly designed applicators for both endometrial and cervical cancer, simplified, targeted radiation therapy for gynecological cancer treatment in a minimally shielded setting is possible with GYN electronic brachytherapy (eBx[®]).

The Axxent[®] vaginal applicators are a key component of the Xoft[®] Axxent[®] Electronic Brachytherapy (eBx[®]) System[®], empowering targeted brachytherapy in the vagina and rectum.

The vaginal applicator set provides four channels for the miniaturized x-ray source to deliver isotope-free, high dose rate, low energy radiation treatment. Combined with the comprehensive capabilities of the Xoft System, the vaginal applicators offer an attractive option to physicians and patients for improved flexibility, precision and personalization in the targeted treatment of gynecological cancer.

Reduced Dose to Bladder and Rectum
